The global Automatic Cotton Picking Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The working principle of the automatic cotton picking machine is to open, card and remove impurities from the cotton sent from the previous process or the chemical fiber layer supplied from the cotton box, so that all the cotton loops in the shape of curly blocks become basically straight single fibers. , it can also clean the broken seeds, impurities and short lint left in the blowing process, and then integrate the slivers of set specifications and store them in the cotton cylinder for use in the drawing process. As a process of the cotton opening and cleaning unit, the automatic cotton picking machine is suitable for grabbing various grades of raw cotton, cotton-type chemical fibers and medium-long fibers. The beater of the automatic cotton picking machine reciprocates with the turret to precisely grasp the cotton bales. The captured cotton bundles are transported by airflow to the next opening and cleaning equipment for further processing.
