The global Automatic Direction Finder market size is predicted to grow from US\$ 103 million in 2025 to US\$ 124 million in 2031; it is expected to grow at a CAGR of 3.1% from 2025 to 2031.

Automatic Direction Finder is an instrument that intercepts and uses electromagnetic radiation in the radio portion of the spectrum to determine the direction of the radio transmitter.

A direction finder (DF) can be used by an aircraft or ship as a navigational aid. This is accomplished by measuring the direction (bearing) of at least two transmitters whose locations are already known. When the measured directions from each transmitter are plotted on a map, the intersection of the two plotted lines gives the location of the aircraft or ship carrying the DF. This technique, using the directions to two or more transmitters of known location, is called triangulation.

Global Automatic Direction Finder key players include Rohde-schwarz, Rockwell Collins, RHOTHETA, Taiyo, GEW, etc. Global top five manufacturers hold a share over 85%.

US is the largest market, with a share over 30%, followed by Germany and Japan, both have a share over 45%.

In terms of product, Maritime is the largest segment, with a share over 60%. And in terms of application, the largest application is Search and Rescue, followed by Vessel

Traffic Service, Air Traffic Control, etc.
