The global Automatic Dry Ice Machine market size is predicted to grow from US\$ 155 million in 2025 to US\$ 198 million in 2032; it is expected to grow at a CAGR of 3.6% from 2026 to 2032.

Automatic dry ice machine is a kind of equipment specially used for making dry ice, which is widely used in food processing, logistics cold chain, industrial cleaning and other fields.

Dry ice cleaning has become an integral part of the production process in the machinery industry, and is used to clean production machine parts, welding robots, conveyors and paint production lines, molds, etc. Compared with traditional cleaning methods, dry ice cleaning is a much faster cleaning process that can increase productivity and reduce costs. As companies pay more attention to environmental regulations, traditional cleaning methods are gradually being replaced by dry ice cleaning, a non-toxic, non-secondary pollution alternative. In addition, the expansion of fresh food e-commerce and cold chain logistics industries has also driven the demand for the use of dry ice in fresh-keeping transportation, further promoting the rapid development of the automatic dry ice machine market.
