The global Automatic Electronic Sphygmomanometer market size is predicted to grow from US\$ 416 million in 2025 to US\$ 659 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

Fully automatic electronic blood pressure monitors are automated blood pressure measurement devices used in medical settings such as hospitals, clinics, and health check centers. They achieve rapid detection of indicators such as blood pressure and pulse through pressure sensing, cuff inflation, and algorithm recognition and display systems.

Upstream components include pressure sensors, air pumps, solenoid valves, cuffs, chips, displays, batteries, casings, algorithm software, and medical certification services. Downstream components target hospitals, primary care clinics, health check-up institutions, elderly care facilities, and chronic disease management platforms.

The global market price for fully automatic electronic blood pressure monitors is \$190 per unit, with global sales of approximately 2.24 million units and an annual production capacity of 4-6.5 million units. The industry profit margin is approximately 20%.

The future global market for fully automatic electronic blood pressure monitors will develop towards higher precision, intelligence, connectivity, and diversified application scenarios. With increasing demand for hypertension, cardiovascular disease, and chronic disease management, medical institutions' demand for automated, standardized, and data-traceable measurement equipment continues to rise. Products will place greater emphasis on clinical accuracy, interference resistance, multi-population compatibility, and remote data management, and will accelerate integration

with electronic medical records, health management systems, and internet healthcare platforms. Future competition will focus on measurement algorithms, sensor stability, medical certification, brand channels, and after-sales service capabilities.
