The report requires updating with new data and is sent in 48 hours after order is placed.

The working principle of the automatic flat die-cutting machine is that the paper feeder sends the paper into the front gauge and the side gauge through the paper feeding part for positioning, and then the paper is sent to the die-cutting mechanism by the tooth row for secondary positioning for die-cutting, die-cutting. Then it is sent to the waste stripping mechanism by the tooth row, and then enters the paper receiving department after stripping, so as to complete the die-cutting operation.
