The global Automatic Gang Drilling Machine market size is predicted to grow from US\$ 1650 million in 2025 to US\$ 2399 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

An automatic gang drilling machine is an industrial tool used to drill multiple holes simultaneously or sequentially. It consists of several drill heads mounted on a single platform, allowing multiple drills to work together. The 'automatic' feature refers to the machine's ability to operate with minimal human intervention, often using CNC (Computer Numerical Control) systems to guide the drilling process.

Industrial automation upgrades drive demand growth: The accelerated pace of intelligent manufacturing is driving demand for efficient, multi-axis automated drilling equipment, making automatic drilling machines a key piece of precision machining equipment.

The home furnishing and hardware industries are the primary application areas: Automatic drilling machines are widely used in the processing of panel furniture, cabinet doors, and metal parts due to their high efficiency and precision.

Rising labor costs are accelerating equipment replacement: Amidst rising labor costs, automatic drilling machines significantly reduce reliance on manual labor through automated operations, improving companies' cost control capabilities.

Increasing willingness of small and medium-sized enterprises to upgrade: As equipment prices gradually become more reasonable, more and more small and medium-sized manufacturers are willing to adopt automatic drilling machines to improve production

capacity and product quality.

The Asia-Pacific market is a growth highlight: With vibrant manufacturing industries in China, India, and Southeast Asian countries, demand for drilling machines is rapidly growing, making them key regions for global market expansion.
