An automatic girth tank welder is a specialized machine designed for welding the horizontal (girth) seams of large storage tanks and cylindrical structures efficiently and with high precision. Commonly used in industries such as oil and gas, chemical storage, and water treatment, this equipment automates the welding process, reducing labor intensity and improving weld quality. It typically employs advanced welding technologies like submerged arc welding (SAW) or flux-cored arc welding (FCAW) for deep penetration and consistent results. The machine travels along the tank's circumference on a track system, ensuring uniform welds, increased productivity, and reduced construction timelines for large-scale tank fabrication projects.
