An automatic gravity feeder is a mechanical device that utilizes the force of gravity to supply materials in a continuous or intermittent manner. It typically consists of a hopper, a discharge chute, and a control mechanism. The materials are loaded into the hopper, and due to gravity, they flow down through the discharge chute to the designated location. The control mechanism can regulate the flow rate of the materials, ensuring a consistent and accurate supply according to the production requirements. Automatic gravity feeders are widely used in various industries, such as food processing, pharmaceuticals, chemicals, and mining, for feeding bulk materials like powders, granules, and small parts.
