An automatic guided vehicle valet parking system is unlike a mono-path system, which is limited to one lane of lateral movement along a steel rail. An automatic guided vehicle valet parking system employs robots that roll freely in any direction across solid concrete slabs (including underneath parked cars) enabling faster retrievals and the ability to work around obstacles, thereby increasing system redundancy. Vehicles are parked on platforms in transfer cabins which are then collected by AGVs that drive beneath the vehicle platform, lift it, then move it out of the transfer cabin and into the system. The number of AGVs in a system is flexible, based mostly on budget and throughput requirements.

The global Automatic Guided Vehicle Valet Parking System market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
