Automatic homogenizer is mainly used for tissue dispersion in biotechnology, sample preparation in medicine, enzyme treatment in food industry, detection of pesticide residues and veterinary drug residues in food, pharmaceutical industry, cosmetics industry, paint industry and petrochemical industry. The homogenizer adopts stainless steel system, which can effectively separate the surface of body protection sample and the included microbial homogeneous sample. The sample is packed in a disposable sterile homogenization bag, which does not contact with the instrument, and meets the requirements of fast, accurate results and good repeatability. It can be widely used in emulsification, homogenization and dispersion of industrial production.
