The automatic sensing faucet is based on the principle of infrared reflection. When the hand is placed in the sensing area of the faucet, the infrared light emitted by the infrared emission tube is reflected by the human hand to the infrared receiving tube, and the processed signal is sent to the pulse solenoid valve to control the water outlet system. When the hand leaves the sensing area of the faucet, there is no reflection of infrared light, the electromagnetic valve automatically closes, and the water automatically closes.Automatic Induction Tap is a faucet with a hands-free mechanism for opening and closing. Automatic Induction Tap are mainly used in public washrooms.
