The global Automatic Industrial Steam Dryers market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Automatic industrial steam dryers are specialized pieces of equipment used in manufacturing and processing industries to remove moisture from materials using steam as the drying medium.

In an Automatic Industrial Steam Dryer, the steam is generated either internally within the dryer or through a separate water connection. The steam is then released into the drying drum during specific cycles or through a dedicated steam refresh cycle. The steam helps to relax the fibers of the clothes, making it easier for the heat and air circulation in the dryer to remove wrinkles. It can also help to remove static cling and eliminate odors, leaving the clothes looking and smelling fresh. Many automatic steam dryers offer different steam settings, allowing users to adjust the intensity of the steam treatment based on their needs. Some models may also include additional features such as special steam cycles for specific fabric types or a steam sanitize option.
