The global Automatic Laser Grooving Machine market size is predicted to grow from US\$ 466 million in 2025 to US\$ 875 million in 2032; it is expected to grow at a CAGR of 9.6% from 2026 to 2032.

Automatic Laser Grooving Machine refers to a specialized machine that utilizes laser technology to create grooves or cuts in various materials with high precision and automation. It is designed to automate the grooving process, offering efficiency, accuracy, and flexibility in manufacturing or processing applications.

The automatic laser grooving machine market has shown strong growth momentum in recent years, mainly benefiting from the rapid development of the semiconductor industry and the increased demand for precision manufacturing processes. With the increase in chip integration, traditional blade-wheel scribing technology can no longer meet the processing requirements of low-k dielectric wafers. Laser grooving technology, due to its non-contact processing characteristics, can effectively avoid film cracking and shedding, and has become the preferred process in the field of advanced packaging. The Asia-Pacific region occupies a dominant position, accounting for approximately 70% in 2024. Among them, China dominates photovoltaic and consumer electronics demand, while Japan and South Korea focus on high-end chip manufacturing.

At present, the global automatic laser grooving machine market is mainly dominated by international manufacturers such as DISCO, ASMPT and EO Technics, with a combined market share of more than 71%. With the advancement of localization, china manufacturers such as Dr Laser and Huagong Laser have made significant progress in technology research and development and market expansion, gradually narrowing the gap with international leading companies.

Automatic laser grooving machine is widely used in solar cell, integrated circuits and other fields. In the solar industry, it is mainly used for back electrode grooving and heterojunction precision processing of PERC and HJT cells, accounting for about 35% in 2024. This equipment is gradually penetrating into emerging fields such as MEMS sensors, quantum chips and optical communication devices.

In the future, with the further popularization of fields such as 5G, artificial intelligence, and the Internet of Things, the market demand for semiconductor laser grooving machine is expected to continue to grow. At the same time, technological progress and innovation will drive the improvement of equipment performance, reduce production costs, and improve production efficiency. In addition, the demand for environmental protection and sustainable development will also prompt companies to develop more energy-saving and environmentally friendly equipment. Overall, the semiconductor laser grooving machine market has broad prospects and will usher in more opportunities and challenges in the next few years.
