An automatic polarimeter is an instrument for measuring optical rotation. The instrument can be started without preheating. The rotation, specific curl and sugar content of the sample can be tested, which can be repeated automatically for 6 times, and the mean value and root mean square can be calculated. The heat insulation design is adopted in the sample tank to reduce the influence of instrument temperature rise on the sample test. Dark color samples can be measured.

Asia-Pacific is the fastest growing market.
