The fully automatic magnetic cell sorter is a device used to quickly and efficiently separate and purify target cells. It uses magnetic bead-labeled sorting technology and an automated operating system to accurately sort, enrich and separate cell samples. Through the action of the magnetic field, the system can quickly separate target cells from complex mixed cell populations. It is widely used in biotechnology, medical diagnosis, clinical research and other fields, providing important technical support for applications such as cell analysis, pathological diagnosis and gene therapy.

The fully automatic magnetic cell sorter is an important technological innovation in the field of modern biomedicine. Its highly automated and precise cell sorting capabilities have brought great convenience and breakthroughs to scientific research and clinical diagnosis. By combining magnetic bead labeling and magnetic field sorting technology, these systems can achieve rapid, efficient and repeatable sorting of specific cells, providing key support for the development of fields such as cell therapy, immunotherapy and cancer diagnosis. Its advantages in improving experimental efficiency, reducing operational risks and improving sorting accuracy will further promote the progress of biomedical research and clinical applications, and make greater contributions to human health.
