The global Automatic Meat Peeling/Skinning Machine market size is predicted to grow from US\$ 117 million in 2025 to US\$ 155 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

An automatic meat peeling/skinning machine is an industrial processing device specifically designed to automatically and efficiently peel or separate animal skin (or specific layers of skin) from meat. It primarily replaces traditional manual peeling with mechanized operation, aiming to improve efficiency, ensure consistency, reduce labor costs, and enhance safety. Demand stems mainly from the rigid requirements of the large-scale meat processing industry for efficient, standardized, and low-cost production. Its development is directly related to the scaling up of livestock and poultry farming, the growth of deep-processed meat consumption, and rising labor costs. The upstream supply chain includes specialized equipment manufacturers (providing mechanical, electrical, and automated control systems), core component suppliers (high-precision blades, wear-resistant rollers, food-grade hydraulic/pneumatic components), and technology research and development institutions; the downstream directly connects with large-scale slaughtering and processing enterprises and deep-processing plants for meat products (such as bacon, ham, and ready-to-eat chicken breast producers), ultimately serving retail and food industry terminals. This equipment is a key link connecting primary slaughtering and high-value-added meat product processing, continuously driving the upgrading and intensive development of the meat processing industry by improving raw material utilization and production line automation. By 2025, the production of automatic meat peeling machines will be approximately 60,000 units, with an average selling price of approximately US\$2,000 per unit, a gross profit margin of approximately 30%, and a single production line capacity of approximately 1,000 units per year.
