An automatic motor grader is an engineering machinery equipment integrated with automatic control technology, intelligent sensing systems, and mechanical working devices, primarily used for ground leveling operations in earthwork projects. By equipping with GPS/Beidou positioning, laser ranging, tilt sensors, and other devices, it realizes automatic control of the scraper (blade) for lifting, tilting, and moving, completing ground leveling according to preset elevations and slopes without frequent manual intervention. The equipment can be widely applied in scenarios such as road construction, farmland consolidation, and airport runway paving, significantly improving operation accuracy and efficiency while reducing labor costs and operational errors.
