The global Automatic Motor Starters market size is predicted to grow from US\$ 935 million in 2025 to US\$ 1485 million in 2031; it is expected to grow at a CAGR of 8.0% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Motor starters are one of the major inventions for motor control applications. As the name suggests, a starter is an electrical device which controls the electrical power for starting a motor. These electrical devices are also used for the purpose of stopping, reversing and protecting electric motors.

This report focus on Magnetic Motor Starters. This is the other main type of motor starter. It is operated electromagnetically. It means that the motor load connected to the motor starter is typically started and stopped using a lower and safer voltage than the motor voltage. Just like other motor starters, the magnetic starter also has an electrical contactor and overload relay to protect the device from too much current or overheating.

The automatic motor starter uses an electromagnet for its operation and offers the remote and automatic operation, different from manual motor starters. The automatic motor starters are available in accordance with the standards of the International Electrotechnical Commission (IEC) and the National Electrical Manufacture Association (NEMA). Strict regulations by various legislative bodies for a few industries such as oil and gas, power generation, mining, etc. to introduce control measures for safety lead to the introduction of automatic motor starters and thus to the growth of the market for

automatic motor starters. Automatic motor starter draw less starting current and thus save energy, this key factor also contributes to the worldwide sales of automatic motor starter.
