The global Automatic Multi Disc Cross Cutting Machine market size is predicted to grow from US$ 66.42 million in 2025 to US$ 92.12 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

In 2024, global sales of automatic multi-disc cross cutting machines will reach approximately 2,200 units, with an average price of US$29,500 per unit and a gross profit margin of 21%–24%. This type of machine is a high-efficiency cutting tool designed specifically for the stone and ceramic industries. It uses multiple saw blades operating simultaneously to rapidly split slabs horizontally. It features high cutting precision, high processing efficiency, and relatively low energy consumption. It can also be combined with automatic loading and conveying systems to enhance overall production line automation. Market demand primarily comes from the stone slab finishing, floor tile production, and building interiors industries. Its upstream supply chain includes raw materials and components such as saw blade alloy steel, carbide cutter heads, CNC servo systems, and reducers. Its downstream market connects to the construction materials, home furnishing, and stone product processing markets. MKS has an annual production capacity of approximately 350 units, covering Europe, the Middle East, and parts of the Asia-Pacific market. In a typical application scenario, large stone processing plants typically employ four machines, while export-oriented plants in the Middle East and Europe may employ five to seven or more. Each machine can cut approximately 400,000 to 700,000 square meters of plate annually.

United States market for Automatic Multi Disc Cross Cutting Machine is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
