An automatic neck banding machine is a packaging equipment designed for the efficient and automated application of neck bands or sleeves onto bottles, jars, or containers. These machines are commonly used in industries such as food and beverage, pharmaceuticals, cosmetics, and household products to provide tamper-evident seals, enhance product safety, and improve shelf appeal. The machine operates by feeding pre-cut or continuous rolls of heat-shrinkable or stretchable film through a mechanism that wraps it around the neck of the container, creating a secure and tight seal. Some advanced models may also incorporate heat or steam tunnels to shrink the film onto the container for a snug fit. Automatic neck banding machines offer high-speed operation, precise control, and versatility in handling various container shapes and sizes, making them ideal for high-volume production environments. Additionally, these machines may feature adjustable settings for band width, length, and tension, allowing for customization to meet specific packaging requirements. Overall, automatic neck banding machines streamline the packaging process, ensure product integrity, and enhance brand presentation for a wide range of packaged goods.

The global Automatic Neck Banding Machine market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
