A depaneling machine is a milling machine used for the shaping of solid materials. Its basic form is that of a rotating cutter which rotates about the spindle axis, and a table to which the workpiece is affixed. The cutter and workpiece move relative to each other, generating a toolpath along which material is removed. The movement is precisely controlled.
According to our Semiconductor Research Center, the global total output value of PCB was about US$ 81 billion in 2022. With strong drivers from new technology, such as AI, 5G and new energy vehicles, it is estimated that the PCB industry will continue to grow steadily in the next six years. Global PCB manufacturers are mainly located in China mainland, China Taiwan, Japan, South Korea, Europe and the United States. Among them, Chinese local PCB companies hold the biggest share.
