Peptide Synthesizer is an instrument used for peptide synthesis according to the principle of solid phase peptide synthesis. Peptides are used to prepare epitope-specific antibodies, map antibody epitopes and enzyme binding sites and to design novel enzymes, drugs and vaccines. Peptide synthesis is characterized as the formation of a peptide bond between two amino acids.

As the introduction of peptide synthesizer, the development of polypeptide therapeutic market is becoming faster and faster, which drives the development of peptide synthesizer industry in return.
