The global Automatic Peritoneal Dialysis Machine market size is predicted to grow from US\$ 888 million in 2025 to US\$ 1400 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

A fully automated peritoneal dialysis machine (APD) is a home dialysis device that automatically completes the "infusion-indwelling-drainage" cycle at night or during a set time. It controls dosage, time, and pressure through a program, and features alarms, data logging, and safety interlocks to help kidney failure patients complete peritoneal dialysis treatment at home.

Upstream: Medical-grade plastics and consumables (tubing, bags, cartridges), pumps, valves and motors, sensors and control boards, software and communication modules, sterilization/disinfection, and dialysate raw materials, etc. Downstream: Hospital nephrology departments and dialysis centers, home dialysis service providers, distribution channels, health insurance/commercial insurance payers, and end patients.

In 2025, the global unit price of a fully automated peritoneal dialysis machine was US\$19,140, with sales of 47,450 units and a global annual production capacity of 48,000 units. The industry profit margin was 25-30%.

Global Market Future Development Trends:

Home-based Care and Increased Penetration: The aging population, rising burdens from chronic diseases, and healthcare cost control are driving the shift from in-hospital to home care. APDs (Automatic Patient Detectors) are increasing adoption due to their advantages of nighttime automation and reduced nursing burden, while patient

education and follow-up systems will be further improved.

Intelligent Connectivity and Security Upgrades: Remote monitoring, cloud-based prescription adjustments, anomaly alerts, and closed-loop management are accelerating their implementation. Regarding risks such as peritonitis, devices will strengthen aseptic connections, leak/pressure monitoring, traceability of disposable consumables, and user-friendly human-machine interaction.

Product Form and Global Expansion: Portability, low noise and energy efficiency, consumable integration, and multi-scenario power supply are becoming the direction of iteration. Emerging markets are experiencing significant growth driven by policies and localized supply chains. Manufacturers are consolidating long-term revenue through service networks, consumable bundling, and comprehensive solutions.
