Automatic plant irrigating systems are devices or systems that can automatically provide water to plants. These systems can provide water to plants at the right time and amount according to the plant's needs, thereby maintaining the growth and health of the plants.

There are various types of automatic plant irrigating systems, including drip irrigation systems, sprinkler systems, and irrigation pipeline systems. Drip irrigation systems can deliver water directly to the roots of plants, while sprinkler systems can spray water mist around the plants to provide water. Irrigation pipeline systems can deliver water to the roots of plants through pipes.

The advantages of automatic plant irrigating systems are that they can provide the right amount of water to plants, avoiding plant death caused by over or under watering. In addition, these systems can automatically control the supply of water, reducing the workload of manual watering.
