Automatic Post Printing Finishing Equipment refers to machinery that completes various finishing processes on printed materials, typically following the main printing operation. This equipment automates tasks such as cutting, folding, binding, laminating, and coating to ensure the final product meets quality standards and is ready for distribution or sale. Automating these tasks increases efficiency, reduces labor costs, and ensures consistent quality in large-scale production.

In 2024, global Automatic Post Printing Finishing Equipment production reached approximately 112 K units, with an average global market price of around K US\$ 23 per unit. The single-line production capacity of Automatic Post Printing Finishing Equipment is 5,200 to 5,400 units per year, the average gross profit margin was 34% .

The upstream of the supply chain for automatic post - printing finishing equipment mainly involves the suppliers of raw materials and components. This includes suppliers of metal materials for the machine body, electronic components for control systems such as sensors and controllers, and mechanical parts like bearings, gears, and motors. The midstream is occupied by the manufacturers of automatic post - printing finishing equipment, which are responsible for the research and development, design, production, assembly, and quality control of the equipment. The downstream consists of various users, mainly printing enterprises, packaging enterprises, and other related manufacturers. These users purchase the equipment to improve the quality and efficiency of their printed and packaged products, and they also have corresponding

requirements for after - sales service and technical support.
