Automatic poultry farming equipment refers to a series of mechanical and electronic devices that are used in poultry breeding to realize the automation of various links in the breeding process, reducing human labor and improving breeding efficiency and quality. It includes automatic feeding systems that can accurately distribute feed to poultry at set times and amounts. Automatic drinking systems are also part of it, which can provide clean and fresh water for poultry in a timely manner, and some can even monitor water quality. In addition, there are environmental control systems that can automatically adjust temperature, humidity, ventilation and lighting in the breeding environment to create a suitable living condition for poultry. Equipment for automatic manure cleaning is used to regularly clean up poultry manure, keeping the breeding environment clean and hygienic. Egg collection and grading equipment can automatically collect and classify eggs according to different standards. There are also intelligent monitoring systems for poultry diseases, which use sensors and other technologies to monitor the health status of poultry in real time, enabling early detection and treatment of diseases.
