Powder coating is a dry coating process used as a metal finish mostly on industrial equipment. Powder coating is applied as dry powder through an electrostatic process, then cured with heat. It is well known for providing high-quality finishes in terms of both functionality and overall look. In contrast to wet painting, which also functions without electrostatics, powder coating requires electrostatics. The powder particles stick to the work piece through image charging. Powder particles, which have no charge, do not stick to the work piece and fall down. And there are two methods of charging: by ionization and by friction. This report focus on the powder coating gun that applied in the automatic powder coating systems.
