The global Automatic Pressure Standards market size is predicted to grow from US$ 742 million in 2025 to US$ 1259 million in 2032; it is expected to grow at a CAGR of 8.0% from 2026 to 2032.

In 2024, global sales of automatic pressure standards will reach approximately 41,500 units, with an average unit price of approximately $17,000. Automatic pressure standards are a type of high-precision pressure reference device that typically integrates a high-stability pressure generator module, a digital sensor, temperature compensation, and an automatic control system. They can fully automatically generate and calibrate pressure values ??from low to ultra-high pressures in the field or laboratory. They are used for measurement and calibration of various pressure sensors, transmitters, pressure gauges, and process instruments, with accuracy reaching 0.01%FS or higher. They are key metrological equipment for energy, aerospace, petrochemical, power, and metrology and testing organizations. Their upstream supply relies on high-precision pressure sensor cores, quartz or silicon piezoresistive elements, servo control valves, hydraulic/pneumatic modules, and precision machined parts. Their downstream market primarily targets metrology and testing organizations, process industries (petrochemical, power, and pharmaceutical), research laboratories, and aerospace equipment manufacturers.

United States market for Automatic Pressure Standards is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
