The global Automatic Pulp Molding Machines market size is predicted to grow from US$ 759 million in 2025 to US$ 1046 million in 2031; it is expected to grow at a CAGR of 5.5% from 2025 to 2031.

The automatic pulp molding machine is a device that uses pulp molding technology for packaging and reproduction. Pulp molding is a three-dimensional papermaking technology. It uses waste paper as raw material, and shapes paper products of a certain shape by a special mold on a molding machine. The raw material it uses is waste paper, including cardboard, waste paper box paper, waste white edge paper, etc., which come from a wide range of sources; its production process is completed by pulping, adsorption molding, drying and shaping. Pulp molding can be recycled and reused with less harm to the environment.

Growing utilization of pulp molded packaging products across numerous end-use industries is expected to drive the demand for pulp molding machines over the forecast period in areas such as food & beverages, electronics, and healthcare. Over the years, many regulators and governments around the world have imposed restrictions on the generation of primary plastic waste. In addition, more and more foodservice operators and retail chains are expected to move away from plastic packaging pulp molded packaging to meet the growing consumer demand for sustainable packaging. These factors are expected to positively impact the industry growth.
