The gross margin of major industry participants was approximately 25%-40%. Automatic Quartz Boat Loading and Unloading Machine is an automated wafer handling system used in photovoltaic cell manufacturing and certain semiconductor tube furnace processes. It is mainly deployed before and after diffusion, thermal oxidation, annealing and other furnace processes to automatically load wafers into quartz boats or unload wafers from quartz boats. The equipment helps reduce wafer breakage, contamination and process instability caused by manual wafer insertion, and is an important automation tool in high-efficiency solar cell production lines. The upstream supply chain mainly includes servo motors, linear guides, robotic arms, vacuum suction components, sensors, vision inspection systems, PLCs, industrial computers, pneumatic components, quartz boats and precision-machined structural parts. The midstream consists of equipment manufacturers responsible for mechanical design, control system development, equipment assembly, commissioning and integration with customer production lines. Downstream applications are primarily concentrated in diffusion, oxidation and annealing processes in photovoltaic cell manufacturing, with additional use in mature semiconductor and other batch thermal processing applications.
