Automatic Radio Direction Finder is an instrument that intercepts and uses electromagnetic radiation in the radio portion of the spectrum to determine the direction of the radio transmitter.

A direction finder (DF) can be used by an aircraft or ship as a navigational aid. This is accomplished by measuring the direction (bearing) of at least two transmitters whose locations are already known. When the measured directions from each transmitter are plotted on a map, the intersection of the two plotted lines gives the location of the aircraft or ship carrying the DF. This technique, using the directions to two or more transmitters of known location, is called triangulation.

The Major consumption regions of direction finder are North America, Europe and Asia-Pacific which accounting for more than 85% of consumption value in total. Direction Finder product demand is in a certain space, and the main consumer countries are moderately developed countries and developed countries, the consumption of emerging countries is a key driving factor. The key manufacturers are Rohde-schwarz, Rockwell Collins (UTC), TCI (SPX), Taiyo, RHOTHETA Elektronik GmbH, GEW, Thales, BendixKing, TechComm, Narda, Caravan etc. Top 3 companies occupied about 72% market share.
