Rotary pulp moulding machine for fully automatic production of shaped paper mouldings, comprising a frame, a stock chest fixed to the frame, a forming wheel frame rotatably mounted on the frame and partially immersed in the stock chest, a transfer wheel frame rotatably installed on the frame and parallel to the axis of the forming wheel frame, a multi-component forming mold fixedly installed on the forming wheel frame, a transfer mold installed on the transfer wheel frame and corresponding to the number of forming molds, located in Transfer the discharge conveyor under the side of the wheel frame. The transfer wheel frame and the forming wheel frame installed on the same frame rotate in the opposite direction synchronously. A set of forming molds for demolding and unloading are docked with the corresponding transfer mold at the transfer station. During the synchronous rotation process, the forming mold blows air and blows out the paper mold. Products, transfer the mold vacuum to absorb paper molded products, and realize the transfer of products. The transfer die is unloaded above the unloading conveyor belt, realizing non-intermittent transfer and unloading, thereby improving production efficiency.
