The global Automatic Rotary Shoe Injection Molding Machine market size is predicted to grow from US\$ 275 million in 2025 to US\$ 366 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

An automatic rotary shoe injection molding machine is a specialized industrial machine designed for efficient, high-volume production of footwear. This machine uses injection molding technology to create shoe components, especially soles, by injecting molten material, typically rubber, EVA, PVC, or TPR, into molds. The machine has a rotary table with multiple mold stations (usually between 8 to 24). This rotating setup enables continuous operation, as one station injects while others cool and new materials are prepared, ensuring minimal downtime.

The automatic rotary shoe injection molding machine industry is undergoing profound technological innovation and market transformation, showing three core trends: intelligence, greening, and flexibility. At the technical level, the deep integration of artificial intelligence and the Internet of Things (IoT) has become the mainstream direction. For example, through sensors to monitor parameters such as temperature and pressure in real time, combined with deep learning algorithms to achieve dynamic optimization of process parameters, production efficiency can be increased by 15%-20% and energy consumption can be reduced by more than 30%. Multi-material adaptation and customized production capabilities have become the focus of competition. The equipment is not only compatible with a variety of materials such as TPR, EVA, and bio-based PLA, but also can achieve single-color, two-color, and even three-color injection molding through rapid mold change technology. In the field of sustainable development, the industry is accelerating its transformation to low carbonization: on the one hand, the application of servo drive systems and magnetic

suspension frequency conversion technology reduces energy consumption by 42%-58%, and on the other hand, the proportion of bio-based polymers and solvent-based adhesives used has increased year by year.
