An automatic screw pump is a type of pump that is used to move liquids or semi-solids through a system.

The pump consists of a screw that rotates inside a cylinder or tube. As the screw turns, it creates a vacuum at the inlet of the pump, which draws the liquid or semi-solid into the pump. The screw then forces the material through the pump and out the other end.

Automatic screw pumps are commonly used in the food, pharmaceutical, and chemical industries. They are particularly useful for pumping viscous or abrasive materials that would be difficult to move with other types of pumps.
