The global Automatic Sensor Soap Dispensers market size is predicted to grow from US$ 660 million in 2025 to US$ 1226 million in 2031; it is expected to grow at a CAGR of 10.9% from 2025 to 2031.

Automatic sensor soap dispensers dispense a controlled amount of soap solution (or a similar liquid such as a hand sanitizer). They are often used in conjunction with automatic faucets in public restrooms. They function to conserve the amount of soap used and stem infectious disease transmission.

In general, these devices utilize a passive infrared sensor that's activated by waving a hand or object nearby. Once activated, the device dispenses a pre-programmed amount of soap. Automatic dispensers built into sink basins often feature radar-based sensors, which sense disruptions in energy.
