An automatic sheet-feed scanner is a high-speed document scanning device designed to automatically pull in and digitize stacks of paper, making it ideal for offices, banks, medical institutions, and digitization projects. Unlike flatbed scanners, which require manual placement of each page, sheet-feed scanners use an Automatic Document Feeder (ADF) to scan multiple pages continuously, including double-sided documents (duplex scanning).

Key features often include OCR (optical character recognition) for searchable PDFs, network connectivity, high DPI resolution, and support for various paper sizes and weights. These scanners streamline workflows by enabling fast, efficient conversion of physical documents into digital formats for archiving, sharing, or editing.
