The global Automatic Silicon Cleaner market size is predicted to grow from US\$ 2847 million in 2025 to US\$ 4191 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

In 2025, the global production of Automatic Silicon Cleaner reached 3,850 units, with an average global price of US\$756,000 per unit. The gross profit margin of major companies in the industry was approximately 25%-40%. Automatic Silicon Cleaner is specialized wet-process equipment used for cleaning and purifying the surface of solar-grade silicon. They can remove surface-adhered solid particles, organic matter, metal ions, and other contaminants, as well as natural oxide films. The equipment typically uses a mixture of HF and HNO₃ acids for etching, weak acid immersion, pure water rinsing, and drying to remove the oxide layer, metallic impurities, dust, and organic contaminants from the silicon surface, thereby improving the cleanliness of the silicon and reducing the pollution risks in subsequent crystal pulling, silicon wafer manufacturing, or recycling processes. Its 'fully automated' nature is mainly reflected in automatic loading and unloading, chemical circulation, temperature control, cleaning cycle control, wastewater discharge, and safety protection, which reduces manual contact with acid solutions and improves processing efficiency and process consistency.
