Abstracts

The global Automatic Single Disc Cross Cutting Machine market size is predicted to grow from US$ 12.87 million in 2025 to US$ 17.14 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

In 2024, global sales of automatic single-disc cross-cutting machines (SCMs) will reach approximately 1,100 units, with an average price of approximately US$11,500 per unit and a gross profit margin of 24%–28%. Automatic single-disc cross-cutting machines are primarily used for vertical and horizontal cutting of marble, granite, artificial stone, and ceramic slabs. They use a single, large-diameter diamond saw blade to cut slabs to length. They are suitable for small and medium-sized stone mills or for specific process requirements. While relatively compact and energy-efficient, they lack the efficiency and versatility of multi-disc cross-cutting machines. This equipment is in high demand among small and medium-sized stone mills and regional processing plants. In a typical application scenario, each unit can process 150,000–250,000 square meters of slabs annually. The upstream process involves diamond saw blades, alloy steel frames, servo motors, and cooling water systems; the downstream process covers small and medium-sized stone mills, ceramic processing plants, and architectural decoration companies, and is used for cutting countertops, floor tiles, and engineered slabs. MKS Mermer Kesme has an annual production capacity of approximately 100 units in this field, and its products are highly competitive in the Turkish and Middle Eastern markets due to their cost-effectiveness and stability.

United States market for Automatic Single Disc Cross Cutting Machine is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
