The global Automatic Staining and Coverslipping Machine market size is predicted to grow from US\$ 273 million in 2025 to US\$ 406 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

An automatic staining and coverslipping machine is a laboratory device used primarily in histology and pathology to streamline the preparation of tissue samples for microscopic examination. These machines automate the processes of staining tissue sections with various dyes to highlight specific cellular structures and then applying coverslips to protect the samples for viewing. By reducing manual handling, these machines enhance efficiency, consistency, and reproducibility in sample preparation, ultimately improving diagnostic accuracy in medical laboratories and research settings.

The market for automatic staining and coverslipping machines is in a stage of rapid development, driven by the growth of biomedical research and clinical diagnosis needs. With the advancement of technology, these devices have been continuously improved in terms of automation, accuracy and ease of operation, significantly improving the work efficiency and sample processing quality of laboratories. European and American companies occupy the high-end market with their first-mover technology advantages. For example, Leica Biosystems, Roche, and Eprexia have consolidated their positions by integrating AI-assisted diagnosis systems; while local manufacturers in Asia-Pacific, such as Sakura Medical, Dakewe Biotech and Chiwell Biotechnology? have accelerated their penetration into the primary care market with their cost-effectiveness, especially in emerging regions such as India and Southeast Asia, where modular design has been used to lower the procurement threshold.

In addition, with the rise of personalized medicine and precision medicine, the market

demand for high-throughput and high-efficiency staining and sealing solutions is increasing. North America and Europe are the main markets, and the Asia-Pacific region also shows strong growth potential. With the continuous advancement of technology and the improvement of automation levels, the advantages of automatic staining and coverslipping machines in improving laboratory efficiency and result accuracy will further promote market development.
