The global Automatic Surgical Robotics market size is predicted to grow from US\$ 4299 million in 2025 to US\$ 9814 million in 2032; it is expected to grow at a CAGR of 12.8% from 2026 to 2032.

An automatic surgical robot is a high-end medical device that combines robotics, artificial intelligence (AI), computer vision, precision mechanical control and medical imaging technology, designed to assist or partially replace surgeons in performing complex surgical operations. It not only improves the accuracy and safety of surgery, but also promotes the development of modern surgery towards intelligence and precision.

With the development of robotics and artificial intelligence, automatic surgical robots can provide higher precision and flexibility than traditional surgical methods, significantly improving patients' treatment outcomes and postoperative recovery speed. In addition, the growing global demand for reducing surgical trauma, shortening hospital stays, and accelerating recovery has further promoted the development of this market. The government's emphasis on innovative medical technologies and digital health and its supportive policies have also provided a good environment for the popularization of automatic surgical robots. Finally, in order to improve their competitiveness and service quality, medical institutions are also actively investing in the introduction of such high-end equipment.
