An automatic thread trimmer is a device integrated into sewing machines designed to automatically cut excess threads from the fabric after a stitching operation is completed. This component is essential for maintaining a clean and professional finish on sewn products by eliminating the need for manual trimming of threads, which can be time-consuming and inconsistent. The automatic thread trimmer operates by detecting the end of a stitching cycle and using a cutting mechanism, such as a blade or rotary cutter, to trim both the upper and lower threads. This feature is particularly valuable in high-volume production environments where efficiency and precision are critical, such as in garment manufacturing, upholstery, and quilting. By automating the thread-trimming process, the device helps streamline workflows, reduce labor costs, and improve overall productivity while ensuring a high-quality finished product.

The global Automatic Thread Trimmer market size is projected to grow from US\$ 226 million in 2024 to US\$ 271 million in 2030; it is expected to grow at a CAGR of 3.1% from 2024 to 2030.
