The research report highlights the growth potential of the global Automatic Transdermal System market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Automatic Transdermal System are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Automatic Transdermal System. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Automatic Transdermal System market.

The automatic transdermal system is to test the decomposition and diffusion of transdermal drugs or cosmetics under controlled conditions under specified environment and conditions, so as to simulate the in vivo absorption process of the test substance.

Compared with traditional medication methods, the advantages of transdermal drug delivery systems are the main reason for the rapid development of the market. In addition to effectively avoiding the first-pass effect of the liver, transdermal administration can reduce the irritation of the stomach and intestines caused by oral

drugs and reduce the loss of drug efficacy. The way of injecting drugs will also bring great inconvenience and secondary damage to the body, reducing the risk of damage to patients. dependency. Growth in the pharmaceutical industry, increasing number of patients with chronic diseases, etc. are likely to contribute to the growth of the transdermal drug delivery market.
