The global Automatic Transmission Treatment market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Automatic transmission treatment is a chemical product specifically designed to clean, protect and repair automobile automatic transmissions. Its main function is to remove sludge, carbon deposits and other impurities inside the gearbox, improve the lubrication performance of the gearbox, reduce friction and wear, thereby protecting the normal operation of the gearbox and extending its service life. In addition, some advanced automatic transmission treatment agents also have the function of repairing internal damage to the transmission and preventing frustration and slippage.

With the improvement of environmental awareness, future automatic transmission treatment agents will pay more attention to environmental performance, reduce the emission of harmful substances during use, and reduce the impact on the environment.
