Automatic Tire Killer is a vehicle forced interception device that physically destroys the tires of vehicles that break into the vehicle illegally through sharp tire-breaking spikes that are automatically raised and lowered, forcing it to stop. The core function of this device is to serve as a high-security barrier, usually installed in prisons, military bases, airport restricted areas and other places where vehicles need to be strictly prevented from rushing through checkpoints. It is made of high-strength steel. The tire-breaking spikes are hidden below the ground under normal conditions. After being linked to the access control system, they can remain in a retracted state when authorized vehicles pass through, and quickly pop up to intercept when illegal intrusion is detected. The system has automatic reset, manual override and status feedback functions to ensure that it can quickly switch to safe mode in an emergency. Some high-end models integrate license plate recognition or ground sensor coil technology to further reduce the risk of false triggering.
