The global Automatic Underwear Washing Machine market size is predicted to grow from US\$ 1125 million in 2025 to US\$ 1821 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

The automatic underwear washing machine is a small intelligent washing device designed specifically for washing underwear. It aims to provide a more professional, hygienic and convenient washing experience than traditional washing machines or hand washing.

The growth of the automatic underwear washing machine market is primarily driven by rising health awareness, the rise of female consumption, and the prevalence of refined lifestyles. As consumers pay more attention to personal hygiene and the cleanliness and safety of underwear, traditional mixed washing or hand washing methods are unable to meet the needs of high efficiency, sterility and clothing protection, which has promoted dedicated underwear washing machines to become a new necessity for family healthy living. Furthermore, the maturation of product technology has significantly enhanced the user experience, while the trend toward smart homes and the upgrading of small appliance consumption have also accelerated market acceptance. With technological advancements and evolving consumer attitudes, this market is expected to continue to expand.
