The global Automatic Vacuum Drying System market size is predicted to grow from US$ 332 million in 2025 to US$ 530 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

An automatic vacuum drying system is an advanced drying solution that removes moisture, solvents, or gases from materials under vacuum conditions, significantly reducing drying time while preserving product quality. By lowering the ambient pressure inside the chamber, the system allows liquids to evaporate at much lower temperatures, making it ideal for heat-sensitive materials in industries such as pharmaceuticals, electronics, chemicals, and food processing. The automatic control system manages parameters such as temperature, pressure, vacuum level, and drying duration, ensuring consistent and repeatable drying performance with minimal operator intervention.

In 2024, global automatic vacuum drying system production reached approximately 36.21 k units, with an average global market price of around US$ 8948 per unit. And global automatic vacuum drying system production capacity reached approximately 45 k units. The average gross margin in this industry reached 27.39%.

United States market for Automatic Vacuum Drying System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
