## Abstracts

The global Automatic Wafer Laser Cutting Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Automatic wafer laser cutting machine is a high-precision machine used to cut wafers using laser technology.

With the rapid development of the optoelectronic industry in recent years, the demand for high-performance semiconductor wafers continues to grow. Materials such as silicon, silicon carbide, sapphire, glass, and indium phosphide are widely used in semiconductor wafers. With the greatly increase in wafer integration, wafers tend to become lighter and thinner, and many traditional processing methods are no longer applicable. Laser belongs to non-contact processing, does not produce mechanical stress on the wafer, and has less damage to the wafer, so it is gradually introduced into semiconductor wafer cutting.
