The automatic warp drawing system is a device used in the textile industry to automatically draw the warp yarn (longitudinal yarn) into the warp frame or shed of the loom. It replaces the traditional manual drawing process with automated operation, greatly improving the working efficiency and production capacity of the loom.

This system usually consists of a series of mechanical devices and control systems, which can accurately guide the warp yarn to the correct position, reduce the error and labor intensity of manual operation, and improve the stability and safety of the production line. Through automated control, the warp drawing system can also reduce downtime and worker intervention, and improve overall production efficiency.
