An automatic welding helmet is a type of protective gear worn by operators during arc welding, designed to automatically adjust the light transmission.

In arc welding, intense light harmful to the eyes is generated, and without protective measures, various hazards can occur to the eyes. Additionally, sparks generated during welding pose a risk of burns when they come into contact with the skin.

Therefore, operators engaged in arc welding are required to wear protective gear to safeguard their eyes and face. Types of protective gear include handheld, head-worn, and automatic welding helmets. The automatic welding helmet is a high-performance protective gear that reacts to the ignition of the arc, creating a shading film using a liquid Crystal Filter to protect the eyes from harmful light.

The global Automatic Welding Helmet market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
