The global Automobile Air Compressor market size is predicted to grow from US\$ 8999 million in 2025 to US\$ 12810 million in 2031; it is expected to grow at a CAGR of 6.1% from 2025 to 2031.

An air compressor is a device used to compress gases. The construction of an air compressor is similar to that of a water pump. Most air compressors are reciprocating plug type, with rotating blades or screws. The automotive air compressor is the heart of the automotive air conditioning refrigeration system, playing a role in compressing and transporting refrigerant vapor. Compressors are divided into two types: non variable displacement and variable displacement. According to different working principles, air conditioning compressors can be divided into fixed displacement compressors and variable displacement compressors.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the

world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
